### Technical specifications

- ▶ The Wi-Fi IP camera is equipped with:
  - 1 360° directional mount enabling the camera to be fitted to a table or fixed to a wall or ceiling
  - 1 high definition colour image sensor
  - 1 integrated microphone for audio acquisition
  - 1 automatic image and luminosity correction system
  - Infrared night vision : range 8m
  - Motion detection alert system
  - 1 5Vdc 2A power supply inlet supplied
  - Video resolution : 1280 x 720
  - H.264 compression : providing quality images even with a less than perfect internet connection.

### Compatibility

- ▶ The camera is fully autonomous, but can also be used :
  - With a Thombox: full integration, option to change the direction of the camera and to activate it, to store and view images on a secure server following motion detection.
  - The camera has a network video recorder from the Thomson Security range: can be used as a supplementary camera, enabling you to store video footage from the camera on the video recorder's hard drive, to programme video recordings at preset times and/or when motion is detected, etc.

### Features

- ▶ Simply plugs into an electricity socket and, with its built-in motion sensor, will warn you of any movement inside your home, allowing you to investigate in the event of any alarm. You can also monitor it whenever you wish, e.g. to check that your child has got back home safely from school. Can be used either with your **Thombox** within any scene of your choice, or from the free smartphone and tablet application. High quality image with 720-line HD resolution.
