Ref. DSC - 923W

Barcode 3660215123931

Technical characteristics

- ▶ The outdoor dome camera is equipped with:
 - 1 WiFi antenna to connect wirelessly to the IT network
 - 1 gain and brightness correction system
 - Motion detection warning system
 - 1 12V DC 2A power input (included)
 - Capture resolution: 1280 x 960
 - H.264 compression: enables high-quality images even with a slow internet connection.
 - Infra-red night-vision with a brightness sensor: 20 m range
 - 3 motors allowing you to control rotation (355°), angle (90°) and zoom (4x optical)

Features

- ▶ Designed to resist bad weather (protection rating IP66, operating temperature -20°C to +55°C) and equipped with a motion sensor, your camera will warn you of the slightest movement on your property and will allow you to remotely verify an alarm. You can also check it whenever you like, for example to make sure that your child has come home from school. Suitable for use with your **Thombox** in a scenario of your choice, it can also be used as a stand-alone device with its free smartphone and tablet app. With 960-line HD resolution, you get excellent image quality, and the three motors allow you to point your camera in any direction you like according to your requirements.

Compatibility

- ▶ Completely stand-alone, the camera can also be used:
 - With a Thombox: complete integration – you can activate it, view recordings and store the files on a security server when movement is detected.
 - With a network video recorder from the Thomson Security range, the camera can be used as an additional camera, allowing you to store video from the camera on the recorder hard drive, to program video recordings at certain times/when movement is detected, etc. The motor controls are also compatible with network video recorders from the Thomson security range.
